<b>Note 1:</b> See reference 11			
<b>Note 2:</b> A number of species were identified as priorities under the UKBAP for 'research only', with the aim of stimulating studies into the causes of decline among common moths. The UKBAP is now defunct, and has been replaced by Section 41 of the NERC Act 2006, and the 'research only' species have been retained on the Section 41 list. They all remain common and widespread species both in Nottinghamshire and nationally, and are not listed as Species of Conservation Concern in Wright (2014).			
<b>Note 3:</b> In applying the Grade 3 status set out in Wright (2014), species included in the SoCC list are those Nationally Common species recorded in five or fewer 10km squares in Nottinghamshire since 1990; however, those Nationally Local species recorded from more than five 10km squares in Nottinghamshire since 1990 are omitted from the SoCC list.			
<b>Note 4:</b> This species does not feature in Wright (2014) as at the time of publication, there were no recent records. However, the species was recorded in the county in 2015, and becomes a Grade 1 moth.
